

# INFRASTRUCTURE LA

T A S K F O R C E

April 9, 2020

## Website Launch

Infrastructure LA was organized to forge strategic collaboration among the region's public and private sector infrastructure leaders. While the LA region has an immense inventory of public and private infrastructure, its management is spread across a labyrinth of individual entities, sometimes working in silos with disparate stakeholders. Faced with complex urban challenges and growing infrastructure demand, LA County's public and private infrastructure leaders need a platform to collaboratively develop and deploy strategies to advance new initiatives and remove barriers to infrastructure.

Infrastructure LA identifies and promotes collaborative engagement, policies, initiatives and a more unified emergency response that modernizes public and private sector infrastructure investments in the LA region. The Task Force serves as a collaborative platform to spur innovative thinking and ideas aimed at building the next generation of infrastructure that advances sustainable development of the LA region.

A Task Force was established in response to the COVID-19 pandemic to engage, collaborate, and share resources with impacted agencies and organizations. To facilitate engagement with agencies from the Public Sector, Private Sector, Community Based Organizations (CBOs), Business Associations, Councils of Government (COGs,) Cities, Utilities, and Academia, Infrastructure LA has launched a website which includes resources and information related to the current COVID-19 pandemic, along with opportunities to comment and ask questions.
